Preparing Nevada for Post Roe

The Pro-Life, Pro-Women Response

Southern Nevada— May 3, 2022 — It is time to realize the devastation Roe vs Wade has had on women. Our nation has had 49 years to use propaganda and political tactics to cultivate a culture of death for far too long and women have been left in the shadows to bear the burden of choice with very little support. The majority of communities in our nation lack resources for pregnancy and parenting options, thus loudly advocating that abortion should be the only choice that will be supported. This is not empowerment or choice. This is coercion.

“We hear from women every day at our Center express that there are no alternatives other than abortion,” said Esther Caruso-Golleher, CEO at Women’s Resource Medical Centers, “We believe them. We exist to be their support.”

Abortion enthusiasts are planning and preparing for abortion medical tourism, advertising package deals with flight, hotel room and services to compete with other states for the abortion business. There are even foundations being established to assist women in paying for their travel to our state. Where is the help and assistance for women who would like to choose to have a healthy pregnancy but cannot access care?

Community Impact

Women’s Resource Medical Centers of Southern Nevada has been serving women in our community since 1985 providing programs, resources and support for families experiencing an unexpected pregnancy from the time they find themselves pregnant all the way up until their

baby is three years old. The organization is the ONLY organization in the entire state of Nevada that offers full pregnancy, prenatal care and parenting alternatives free of charge.

Capacity Expansion

Founded in 1984, Women's Resource Medical Centers is known to be the busiest pregnancy care clinic in the nation. The company offers a wide range of products and services designed to advocate for women who experience an unexpected pregnancy. The organization is preparing to expand their capacity in anticipation of the increased demand for their services in a post Roe nation. By the end of this year, Women's Resource Medical Centers will offer their established care model to other communities nationally.
